

AF-55

PRODUCT DESCRIPTION:

AF-55 is a blend of alkyl amines.

TYPICAL PROPERTIES:

Physical Form	Amber Liquid
Specific Gravity	0.92 @ 77 °F
Density	7.6 Lbs./Gal.
Flash Point	>142 °F

PRODUCT USES:

AF-55 is a highly concentrated antifoulant. It is designed to disperse solids and prevent the accumulation and agglomeration of particulate matter in hydrocarbon streams. It is especially designed for use in heavy oils. Prior to use, AF-55 should be diluted with a suitable hydrocarbon such as HAN, diesel or kerosene. A typical dosage range of the diluted material is 20 ppm to 50 ppm.

HANDLING:

AF-55 is combustible. Do not store drums near open flames or extreme heat. Care should be exercised when handling this product. Wear protective clothing including goggles, rubber gloves and a chemical apron. For skin contamination, wash with soap and water. For eye contamination, flush with water and consult a physician.

PACKAGING:

AF-55 is available in drum or bulk quantities.
