

## **OBE-806**

(Primary Emulsifier)

### PRODUCTION DESCRIPTION:

OBE-806 is an extremely efficient, highly concentrated emulsifier and wetting agent for invert emulsion muds.

### TYPICAL PROPERTIES:

Appearance	Dark Brown Liquid
Specific Gravity	0.975 @ 77° F
Flash Point	>200° F
Pour Point	60° F
Activity	100%

### APPLICATION:

OBE-800 is a primary oil mud-emulsifying agent used to emulsify water in hydrocarbon environments. It improves the wetting ability by the oil of the solids dispersed in the invert emulsion mud. Many times OBE-806 is so effective that a secondary oil/mud emulsifier is not needed. A typical dilution is 40%-50%.

### HANDLING:

Use caution when handling OBE-806. Use of gloves is recommended along with protective clothing. Wear safety glasses at all times.

### AVAILABILITY:

OBE-806 is available in bulk or drum quantities.
