

WC-420

PRODUCT DESCRIPTION:

Dispersant Polymer

TYPICAL PROPERTIES:

Appearance	White Liquid with little or no odor
Specific Gravity	1.16 @ 77° F
Flash Point (TCC)	>200° F
pH	3.6

PRODUCT USES:

WC-420 is used for water treating applications where residual oil and solids need to be removed from water for re-injection. WC-420 is used in a variety of applications and is quick to “flock” a wide range of solids in brine and fresh waters.

APPLICATION:

WC-420 is a concentrated material and may be diluted to 0.5% or 1.0% solutions for field application. This material shows a high degree of flocculation of oil, solids, and clays over a broad range of applications. WC-420 should be continuously injected at the appropriate point in the system to get the most efficient agitation. WC-420 may be used as an adjunct for demulsifier in heavy crude to aid in separation in typical settling tanks.

HANDLING:

Avoid contact with skin, eyes, and clothing. If contacted on skin wash with soap and water. Do not take internally. Wear protective clothing when handling this product, including goggles, gloves and aprons.

AVAILABILITY:

WC-420 is available in drum, tote or bulk quantities.
